

Python Installation & Configuration Guide for Beginners

This guide explains how to install and configure Python on **Windows** and **macOS** step by step. It is written especially for beginners with simple language and visual guidance.

Part 1: Installing Python on Windows

Step 1: Download Python

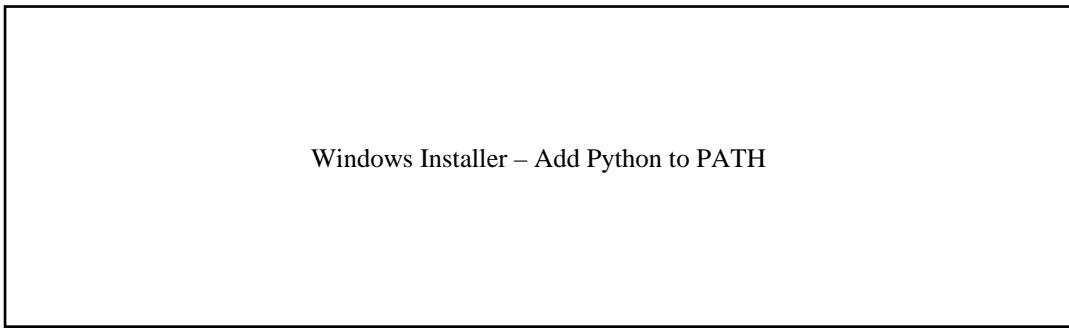

1. Open any web browser (Chrome, Edge, Firefox, etc.).
2. Go to www.python.org.
3. Click on the **Downloads** menu.
4. Download the latest Python version (3.x.x – 64 bit).

Python.org Download Page (Windows)

Step 2: Run the Installer

1. Open the downloaded **.exe** file.
2. **Important:** Check the box that says “**Add Python to PATH**”.
3. Click **Install Now**.

Windows Installer – Add Python to PATH

Step 3: Verify Installation

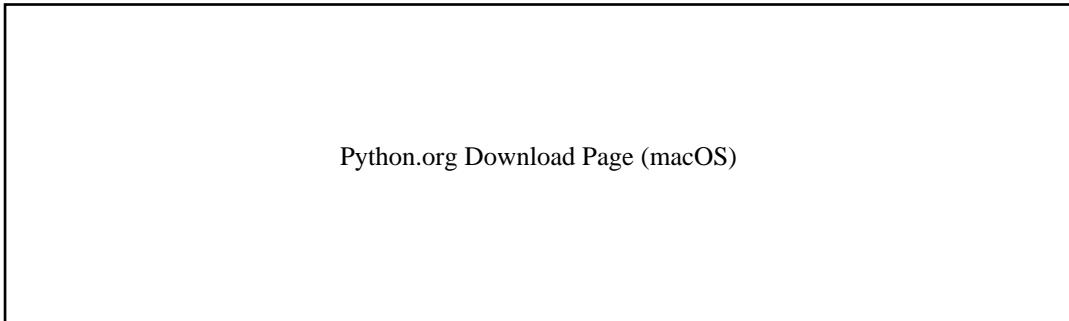

1. After installation, close the installer window.
2. Open **Command Prompt** (search for cmd).
3. Type the command:
python --version
4. If Python is installed correctly, you will see the version number.

Command Prompt – python --version

Part 2: Installing Python on macOS

Step 1: Download Python

1. Open Safari or any browser.
2. Go to www.python.org.
3. Click **Downloads** → macOS.
4. Download the latest Python 3 .pkg installer.

Python.org Download Page (macOS)

Step 2: Install Python

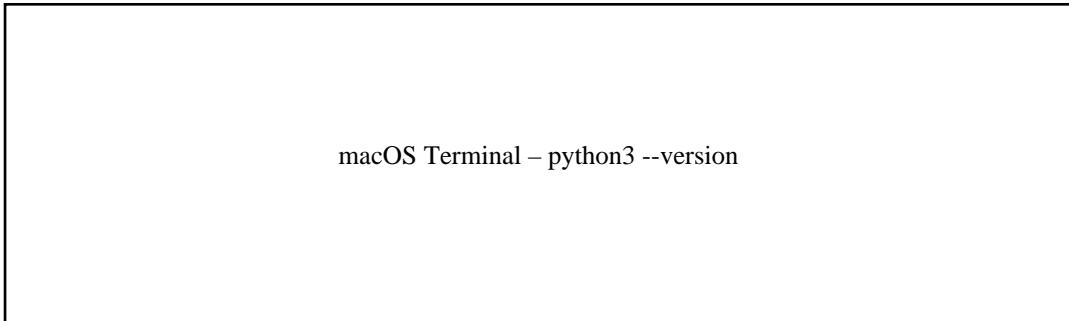

1. Open the downloaded .pkg file.
2. Follow the installation wizard.
3. Click **Continue** and then **Install**.

macOS Python Installer Wizard

Step 3: Verify Installation

1. Open **Terminal** (Applications → Utilities → Terminal).
2. Type the command:
python3 --version
3. The Python version will be displayed if installation was successful.

macOS Terminal – python3 --version

Congratulations!

You have successfully installed Python on your system. You can now start learning Python programming.
